Chapter 3: Constructions
Topic 6: Centroid Day 1

Construction #11: Centroid - All three MEDIANS

Recall: A _____ of a triangle is drawn from the vertex of a triangle to the _____ of the opposite side. A _____ creates two congruent line segments.

The three _____ of a triangle are concurrent at a point called the _____.

Some _____ facts:

- 1.) The _____ is the " _____ " of a triangle.
- 2.) The _____ is *always* found _____ the triangle.

Name: _____ Date: _____ Period: _____

The Coordinates of the Centroid:

Given three vertices of a triangle: (x_1, y_1) , (x_2, y_2) , and (x_3, y_3) , the coordinates of the centroid are the _____ of all of those points. Therefore, the coordinates of the centroid can be found by this rule: _____.

This helps to explain why the centroid is the center of gravity of a triangle.

Examples:

1) Given $\triangle ABC$ with coordinates $A(0,0)$, $B(4,0)$, and $C(2,6)$, show that the medians of $\triangle ABC$ intersect at $(2,2)$.

2) $\triangle ABC$ has vertices $A(-3,3)$, $B(2,5)$, and $C(4,-3)$. What are the coordinates of the centroid of $\triangle ABC$?

3) Given $\triangle PQR$ with vertices $P(3,4)$, $Q(2,8)$, and $R(10,0)$. What are the coordinates of the centroid of $\triangle PQR$?

4) Given $\triangle JKL$ with vertices $J(3x,2y)$, $K(0,4y)$, and $L(6x,0)$. What are the coordinates of the centroid of $\triangle JKL$?

Chapter 3: Constructions
Topic 6 Homework: Centroid Day 1

Solve each of the examples completely. Show steps to your solution. For any construction, show all construction marks.

1.) Construct the centroid of $\triangle ABC$.

2.) Given the coordinates of a triangle, determine the coordinates of the centroid of each triangle:

a.) $D(0, 0)$, $E(3, 15)$, and $F(12, 0)$

b.) $G(-2, 0)$, $H(-4, -3)$, $I(-12, -6)$

c.) $E(x, 2y)$, $F(3x, 5y)$, $G(4x, 2y)$

d.) $T(4, 5)$, $U(6, 1)$, $V(8, 9)$
